

SHARE-RV: Linking SHARE with data from records of the German Pension Fund

Christin Czaplicki and Julie Korbmacher
Workshop „Linking survey and social security data“
23.11.2012, Berlin

mea

SHARE

- Survey of Health, Ageing and Retirement in Europe
 - Multidisciplinary
 - Population 50+
 - Face-to-face
 - bi-annual, longitudinal

**mea**

The Survey of Health, Ageing and Retirement in Europe (SHARE)

Wave 1, 2004

- SE, DK, NL, DE, BE, FR, CH, AT, ES, IT, GR

Wave 2, 2006

- + IE, CZ, PL, IL

Wave 3, 2008

- Retrospective life histories (SHARELIFE)
DE: Pilot study on record linkage

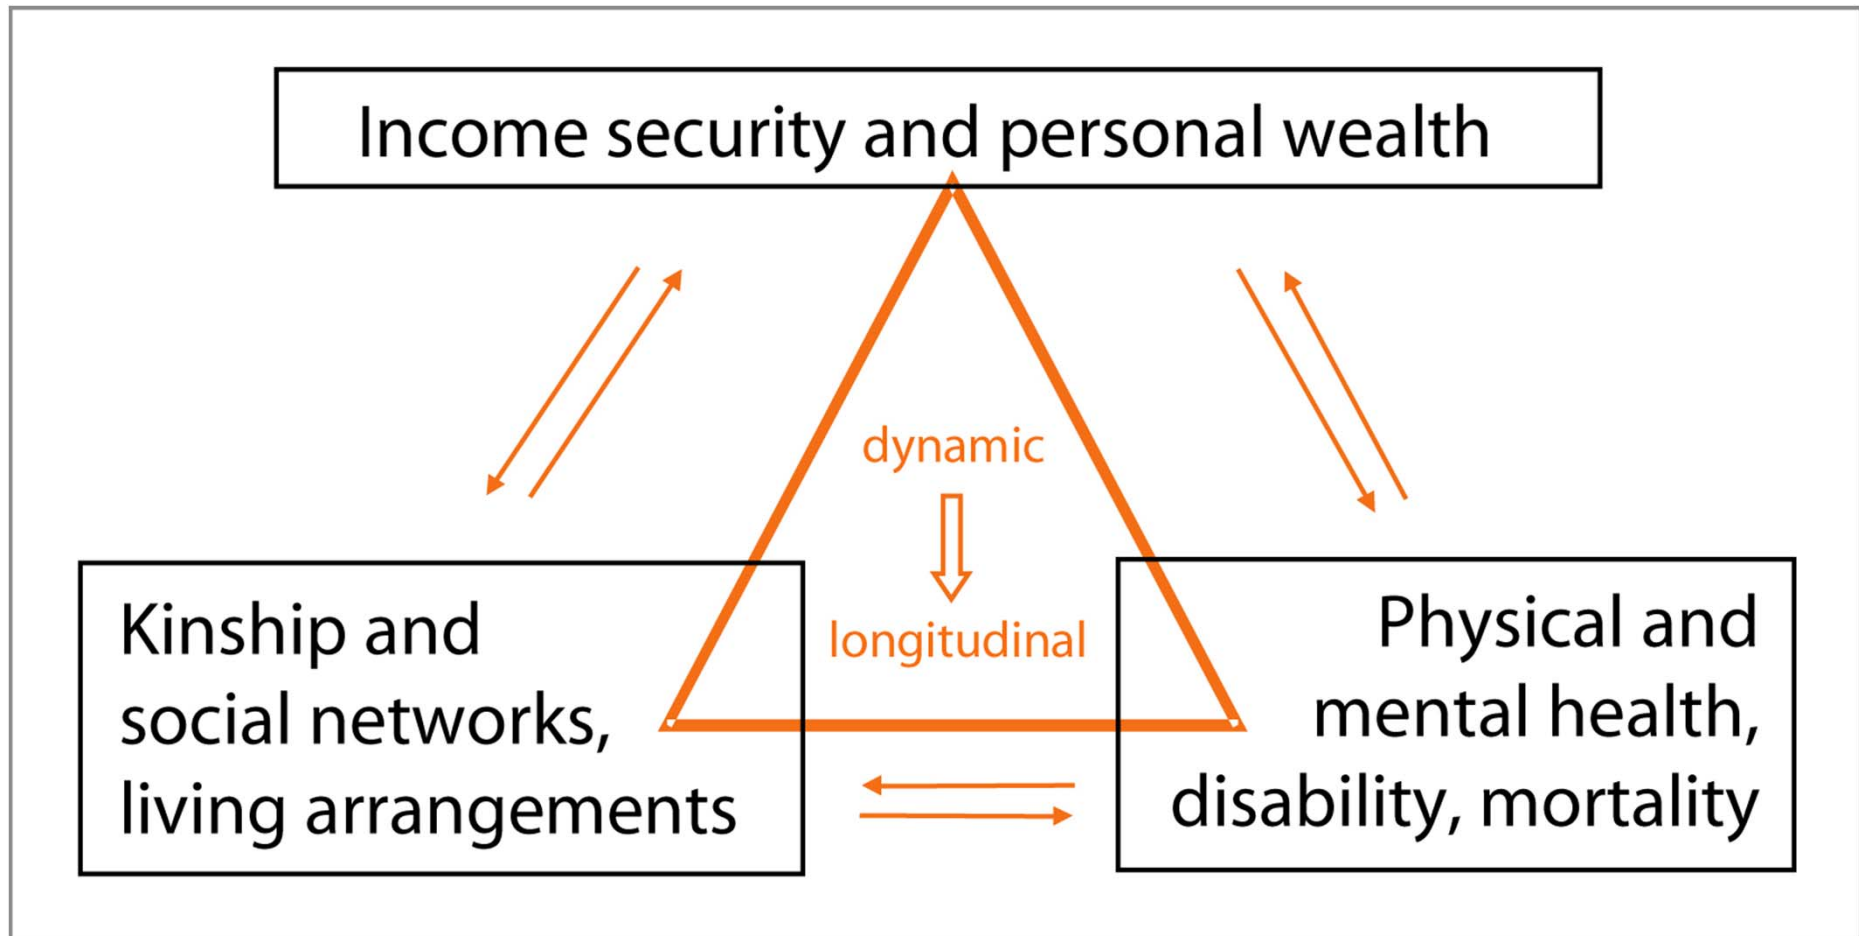

Wave 4, 2010

- + PT, LUX, SV, HU, EE
expansion of the sample
social network module
DE: record linkage, biomarkers,
nonresponse experiment

**mea**

The Survey of Health, Ageing and Retirement in Europe (SHARE)

**mea**

What do we link?

- Survey data (SHARE-Germany)
- **Administrative records of the German Pension Fund (DRV)**
 - Research Data Center
 - Longitudinal data of the insured population (VSKT)
 - Pension data (RTBN)

**mea**

The Sample of the insured population's records

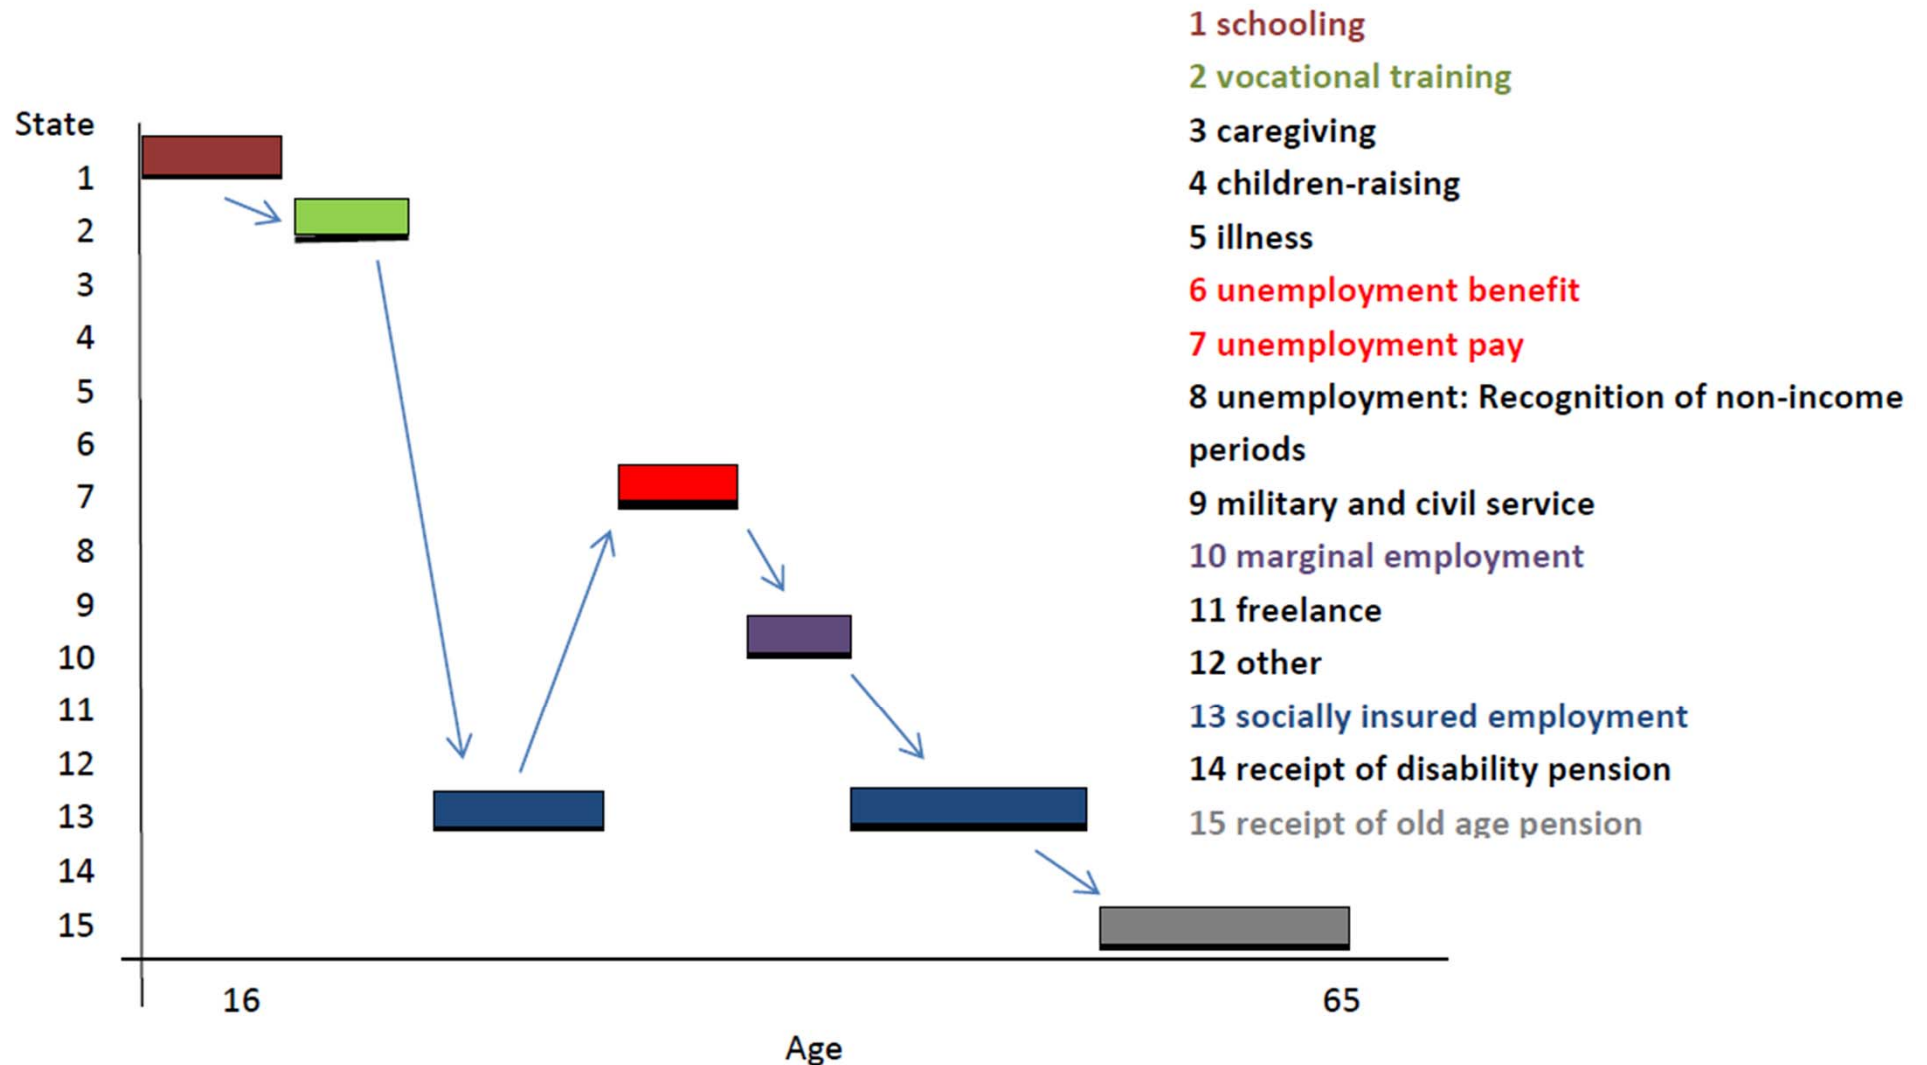

Persons included in the state pension scheme

- people who have at least one day of insured activity
- Insured activities are:
 - Schooling, university, vocational training, socially insured employment, military or civil service, child rearing, unemployment, caregiving, receipt of disability or old age pension
- Not included are following occupations:
 - civil servants, farmers, professionals (e. g. lawyers, medical doctors) who have different old age protection schemes
- No information available on spouse/household

mea

Example for an employment biography in the administrative data

**mea**

Administrative records of the DRV

Pension data: (retirees)

- Year and month of the first payment
- Σ earning points
- Amount of the pension paid by the DRV

**mea**

How do we link?

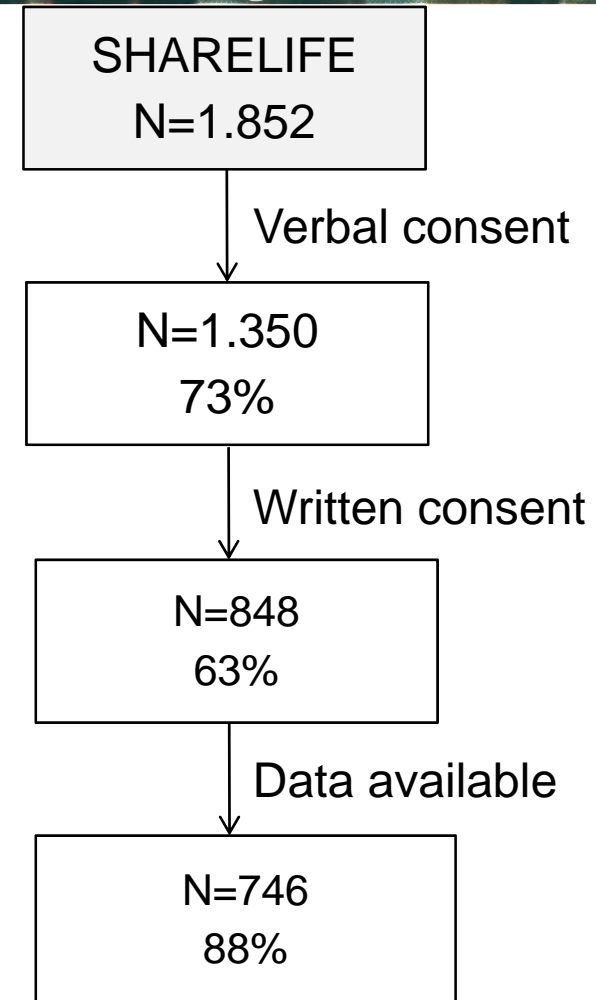

- Survey data (SHARE-Germany)
- Administrative records of the German Pension Fund (DRV)
 - Research Data Center
 - Longitudinal data of the insured population (VSKT)
 - Pension data (RTBN)
- Identification of data from the records of the FDZ-RV via Social Security Number (SSN)
- Written consent

**mea**

SHARELIFE: Pilot Study

Summary:

- Gap between verbal and written consent
- Empty records at DRV reduce number of cases

mea

Methodological issues

when linking survey and administrative data in SHARE

- Identifier
- Respondents' consent

**mea**

Social Security Number

1) Identifier

- Social Security Number (SSN)

Do respondents provide their SSN?

SSN provided	all	W3	W4
Yes	75.3%	88.2%	60.8%
No	24.7%	11.8%	39.2%

Identification
successful in 90%

97,5% of all consent forms

**mea**

Social Security Number

1) Identifier

- possible to collect in a survey
- some additional work to identify respondents if SSN missing
- 97,5% could be identified in the records of the German Pension Fund

**mea**

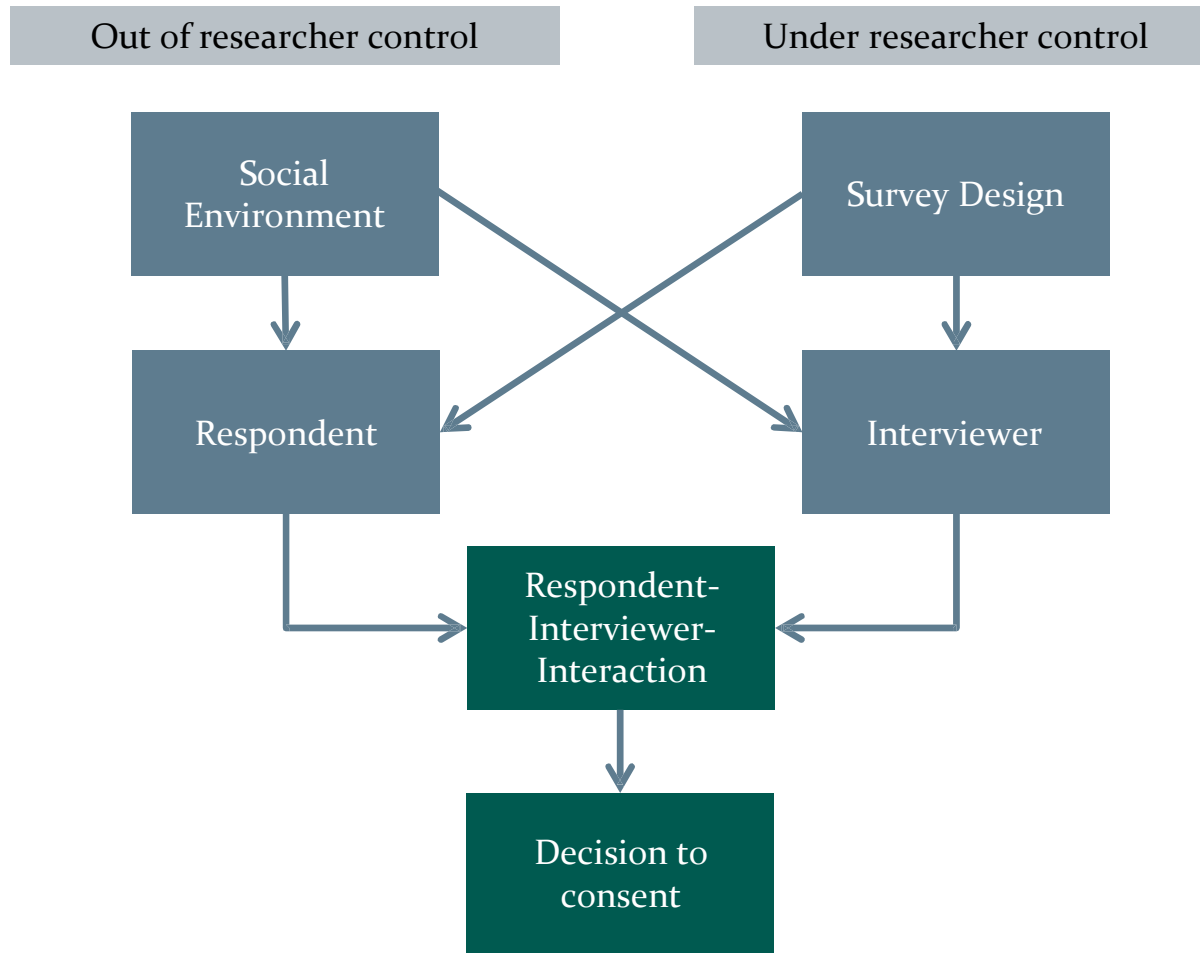

Respondents' verbal consent

2) Consent to record linkage

- Decreases the number of cases
- Systematic differences between consenters and non-consenters -> consent bias
- Determinants of consent (verbal consent)

mea

Adapted from: conceptual framework for survey cooperation developed by Groves & Couper, 1998

mea

Respondent

Out of researcher control

- Demographics
- Employment status
- Household information

Under researcher control

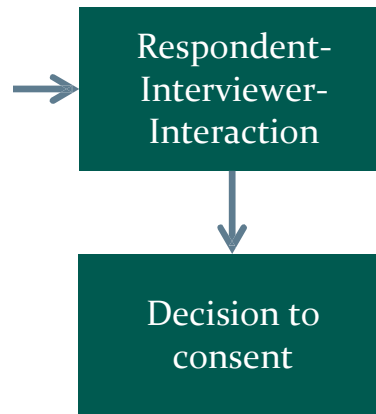

Interviewer

- Demographics
- Time
- Rounding

Respondent-Interviewer-Interaction

- Interviewer known
- Respondents comprehension
- Time
- Missing rate
- Interviewer experience

· survey cooperation developed by Groves & Couper, 1998

**mea**

Determinants of consent

- Multilevel logistic regression
- Respondents nested within interviewers
- Significant effects on all 3 areas
- Respondent (age, living with partner, ever divorced, GDR, urban area, income)
- Interview situation (RES comprehension, missing rate, interviewers experience)
- Interviewer (age, rounding)

**mea**

Determinants of consent

The role of the interviewer

- Intra Class Correlation (ICC): proportion of the variance coming from the interviewer level compared to the overall variance
- 0-Model: ICC= 55%
- Final Model: ICC= 35%
- → very large interviewer influence

**mea**

Conclusions

Administrative data are a useful extension to survey data

Room for improvement:

- More effort in interviewer training
- Make it easy for respondents
 - Huge gap between verbal and written consent
- Ask again

mea

Thank you for your
attention!
