Index of Appendix Tables

1. Additional sources of information

1.1 SHARELIFE Questionnaires

The generic and country-specific questionnaires for SHARELIFE can be downloaded from the SHARE-website:
http://www.share-project.org/data-access-documentation/questionnaires/questionnaire-wave-3-sharelife.html

1.2 SHARELIFE Methodology Volume

The Methodology Volume on retrospective data collection in SHARE is provided at:
http://www.share-project.org/fileadmin/pdf_sharelife/Publications/FRB-Methodology_feb2011_color-1.pdf

1.3 Documentation of SHARE data in general

For a general documentation of the regular SHARE waves also see "Release Guide 6.0.0" and visit www.share-eric.eu for updates in documentation.

2. SHARE data releases

After being registered as a SHARE user you can easily download the data free of charge from the SHARE Research Data Center. Please find the link as well as more general information on the data access procedure here: http://www.share-project.org/data-access.html

Releases are indicated as follows:

- Minor changes will be indicated by the third digit, e.g. release 2.2.1. Please check the website for updates regularly.

- Major changes will be announced to users via e-mail and are indicated by the second digit, e.g. release 2.5.0.

- Combined releases of all waves are indicated by the first digit and have the number of the latest wave as first digit, e.g. release 6.0.0 with wave 6 being the latest wave.

Please note that each SHARE wave and each release is assigned a persistent Digital Object Identifier (DOI). The DOI for SHARELIFE is 10.6103/SHARE.w3.600.

3. A short introduction to SHARELIFE

SHARELIFE is the third wave of data collection for SHARE, which focuses on respondents' life histories. Most of the information collected in the regular SHARE waves is about the current life circumstances. Apart from younger spouses, SHARE respondents were all 50 years or older at the time of their first interview. As a result, we know little about what happened earlier in their lives. SHARELIFE gathers more detailed information on important areas of our respondents' lives, ranging from partners and children over housing and employment history to detailed questions on health and health care. This study thus complements the SHARE panel data by providing life history information to enhance our understanding of how early life experiences and events throughout life influence the circumstances of older people. With this variety SHARELIFE constitutes a unique cross-national, interdisciplinary database for research in the fields of sociology, economics, gerontology, and demography.

Collecting accurate retrospective information is a challenge. Respondents may not remember the occurrence or the exact timing of past events perfectly. Therefore, SHARELIFE follows a *Life History Calendar* (LHC) approach, which has been designed to help respondents in remembering past events more accurately (see fig. 1). Using this method, the life events of interest are displayed on a "calendar", enabling interviewers and respondents to cross-reference certain life-events with others (e.g. "I moved from *A* to *B* the year after my first child was born"). Using the life history calendar technique has been shown to improve the accuracy of the retrospective information given by respondents.

Figure 1:   The Life History Calendar

	'55	'56	'57	…	'65	'66	'67	'68	…	'06	'07	'08
	10	11	12	…	20	21	22	23	…	61	62	63
Children				…					…			
Partners				…					…			
Accommodation				…					…			
Job				…					…			
Health				…					…			

4. Countries

Countries participating in previous SHARE waves also participate in the third wave (SHARELIFE) with one exception: Israel (IL). Table 2 shows the list of countries, country identifiers, participation in waves, and year of data collection. Waves are defined by questionnaire versions used, not by the date of data collection.

Table 1:   Participating countries and fieldwork times in SHARELIFE

ID	Country (Short)	Country	Fieldwork times in SHARELIFE
11	AT	Austria	2008/09
12	DE	Germany	2008/09
13	SE	Sweden	2008/09
14	NL	Netherlands	2008/09
15	ES	Spain	2008/09
16	IT	Italy	2008/09
17	FR	France	2009
18	DK	Denmark	2008/09
19	GR	Greece	2008/09
20	Cg	Switzerland (German)	2008/09
21	Cf	Switzerland (French)	2008/09
22	Ci	Switzerland (Italian)	2008/09
23	Bf	Belgium (French)	2008/09
24	Bn	Belgium (Flemish)	2008/09
28	CZ	Czech Republic	2008/09
29	PL	Poland	2008/09
30	IE	Ireland	2009-2011

5. Eligibility rules

The SHARE target population consists of all persons aged 50 years and over at the time of sampling who have their regular domicile in the respective SHARE country. Persons are excluded if they are incarcerated, hospitalized or out of the country during the entire survey period, unable to speak the country's language(s) or have moved to an unknown address.

The objective of SHARELIFE was to interview all SHARE respondents 50+ who participated in wave 1 or wave 2 as well as their current partners. In case a household splits, younger ex-partners of wave 1 or wave 2 respondents are not followed (this is ex-partners who were below the age of 50 at the time of data collection in wave 1 or wave 2).

Age eligible respondents who participated are traced and re-interviewed if they move within the country and end-of-life interviews are conducted if they decease.

6. SHARELIFE data format, modules and variables

SHARELIFE provides data on sequences of live events in flat file format ("wide"). That is "year of marriage" is looped over all reported marriages and the information is stored as a set of variables in one observation. For analyses requiring a spell data format ("long"), the data matrix has to be reshaped accordingly.

Table 3 shows SHARELIFE module names and variable names as well as their content. Please be aware that some module names coincide with module abbreviations used in waves 1 and 2, but the content differs! For this reason SHARELIFE variables are generally prefixed by "sl_". Usually, the variables stored in a module contain the module name abbreviation in their name. Variables starting with "sl_st" can be found in the st module. There are, however, a few exceptions to this rule, where single variables are stored in a module having a different name (see table 3).

Table 2:   SHARELIFE modules, contents, and deviating variables

Questionnaire Module	Variable name prefix	Content	Variables deviating from module name
ac	sl_ac	Accommodation section	
cs	sl_cs	Childhood section	
dq	sl_dq	Disability	
fs	sl_fs	Financial history section	sl_hh017_
gl	sl_gl	General life questions	
gs	sl_gs	Grip strengths	
hc	sl_hc	Health care section	
hs	sl_hs	Health section	sl_ph003_
iv	sl_iv	Interviewer	
rc	sl_rc	Retrospective children	
re	sl_re	Work history	
rp	sl_rp	Partner section	
st	sl_st	Demographics	
wq	sl_wq	Work quality	
xt	sl_xt	End of life interview	

7. Merging the data

To merge different modules and/or waves on individual level *mergeid* is the key variable. For each individual the variable *mergeid* is a unique and non-changing person identifier for all waves. It has the format "CC-hhhhhh-rr" (e.g. "AT-070759-01"), where CC refers to the short country code (here: "AT" for Austria), "hhhhhh" are digits to identify the household, and "rr" is the respondent identifier within each household. The variable *mergeid* is included in all modules that contain individuals' answers and thus can be used to combine these modules on the individual level.

If the data are to be merged on household level one of the *hhidW* variables should be used as key identifier, where "W" refers to the specific wave. Thus, hhid2 refers to the household in which the individual resided in wave 2. *hhidW* has the following format "CC-hhhhhh-S" (e.g. "AT-070759-A"), where "CC" refers to the short country code, "hhhhhh" is the household identifier, and "S" identifies possible split households, i.e. the household of a panel member who moved out of a previous household. In case of a household split there is not only an "A"-suffix but also "B", "C", etc.

Note that *mergeid* is NOT changed when a respondent moves from the original household. Furthermore, it is possible that the household identifier *hhidW* has a split identifier – for example for a new spouse who first came into the panel in a split household.

As in previous releases, researchers interested in identifying all household members in a current wave – note that this includes also ineligible household members – can use the variable *hhidW*. New since release 5.0.0 is the gv_allwaves_cv_r module which gives an overview of all respondents and non-participating household members across all currently released waves.

The variable *waveid* indicates when a respondent entered SHARE and *waveid_hh* when the household entered the study. Note that when talking about "waves", we consider the questionnaire version used. All household members present in wave 1 have a wave 1 *waveid*. In case a new person moves in a wave 1 household in wave 2, this new household member gets a wave 2 *waveid*. Thus *waveid* and *waveid_hh* can differ from each other. *waveid* has the following values corresponding to the following wave/questionnaire version:

"42" and "52" (latter due to later fieldwork in Israel)   →wave 1
"62" and "92" (latter due to later fieldwork in Israel)   →wave 2
"82"   →wave 3 (SHARELIFE)

Note that *waveid_hh* is never "82" as there was no refreshment sample in wave 3.

In order to see when a respondent or household first appeared in SHARE, the variables *firstwave* and *firstwave_hh* have been introduced. In accordance with the six waves of SHARE, they range from 1 to 6 and are designed as a comprehensive supplement of the variables *waveid* and *waveid_hh*.

8. Missing codes

Apart from so called system missing values due to filters/routing or abandoned interviews, SHARE uses the following missing codes:

A: general missing codes

-1: "Don't know"

-2: "Refusal"

-3: "Implausible value/suspected wrong"

-4: "Not codeable"

-5: "Not answered"

-7: "Not yet coded"

-9: "Not applicable"

B: not applicable – specified

-91: "Not applicable (not yet part of sample)

-92: "Not applicable (no participation in this wave)"

-93: "Not applicable (respondent was not listed as household member in this wave)"

-94: "Not applicable (respondent has an End-of-Life interview in previous waves)"

-95: "Not applicable (no main interview done)"

-98: "Not applicable (other reason)"

-99: "Not applicable (missing by design)"

C: missing codes - financial variables

-9999991: "Don't know"

-9999992: "Refusal"

Treating SHARE missing codes in Stata: sharetom

Stata users can download an ado file (*sharetom.ado* & *sharetom.hlp*) from the data download website. This program recodes missing values to Stata's "extended missing values" and labels them appropriately. Stata's extended missing values, e.g. ".a" or ".b", are treated the same way as system missing values "." are treated. This means, in a tabulate *variable-* command they are not tabulated, unless you add the missing option (tabulate *variable*, missing). *sharetom* should run before you do any other changes in the data.

Treating SHARE missing codes in SPSS

SPSS users should define missing values as all values smaller than 0 for all variables except financial amounts. Missing values for financial amounts should be defined smaller than -9999990.

9. Naming conventions

In general, the naming of variables is harmonized across waves. The same naming conventions apply to SHARELIFE with the exception that variable names are prefixed "sl_" for not confusing variables originating from SHARELIFE with those from the regular panel waves. Variables in SHARELIFE thus generally follow the pattern:

*sl_*mmXXXyy_LL

*sl_*	prefix indicating variable is from SHARELIFE
mm	module identifier, e.g. *st*
XXX	question number, e.g. *001*
yy	optional digits for dummy variables, coded variables or unfolding brackets, using the following indications:

    d   dummy variables (see also chapter 10)

    ub   unfolding brackets (see also chapter 11)

    c   coded variables (see also chapter 12)

_	separation character, to indicate loops;
LL	optional digits for category or loop indication ("outer loop")

Examples:

*sl_rc045_* stores the "number of other children", hence does not allow for multiple responses and is not asked within a loop.

sl_hs045d1, *sl_hs045d2*, *sl_hs045d3,* and *sl_hs045dno* store whether "parents [smoke/ drink heavily/have mental health problems/none of these]" and thus allows for multiple answers stored as a set of dummy variables.

sl_rp008_1, *sl_rp008_2*, *sl_rp008_3, etc.* store the "year married" ("outer loop" over all marriages).

Note that a few variables generically contain letters in their variable names. For example, the variables sl_xt040c_ sl_xt040d_ do *not* refer to a coded or dummy variable based on a variable xt040, respectively, but xt040c and xt040d are the generic variable names (as appearing in the questionnaire). It may also occur that such variables appear as dummy set in the data, such as sl_hc005ad1-sl_hc005ad7, where the "a" stems from the generic variable name and the "d" indicates that the variable is coded as dummy. Table 4 gives the list of all such variables in SHARELIFE.

Table 3:   Variables with trailing letters in their generic names

Module	Variables
ac	sl_ac022a_LL
	sl_ac022b_LL
	sl_ac022c_LL
hc	sl_hc005ad1 – sl_hc005ad7
	sl_hc018ad1 – sl_hc018ad7
	sl_hc030ad1 – sl_hc030ad7
	sl_hc042ad1 – sl_hc042ad7
	sl_hc054ad1 – sl_hc054ad7
	sl_hc066ad1 – sl_hc066ad7
	sl_hc078ad1 – sl_hc078ad7
re	sl_re039a_LL
	sl_re035a_LL
rp	sl_rp002d_
	sl_rp002e_
	sl_rp004c_LL
	sl_rp015a_LL
st	sl_st001a_
	sl_st001b_
xt	sl_xt026b_
	sl_xt040a_
	sl_xt040b_
	sl_xt040c_
	sl_xt040d_
	sl_xt040e_

10. Dummy variables

Answers to all questions that allow for multiple responses appear in the data as several dummy variables. E.g. in wave 1 and 2 question *br005* ("What do or did you smoke") has three answer categories: 1 = Cigarettes, 2 = Pipe and 3 = Cigars or cigarillos. The dataset thus contains three dummy variables: *br005d1*, *br005d2*, and *br005d3* corresponding to the three answer categories. Note that in general we omit leading zeros for the first nine answers in a response set with more than ten answer categories to allow for easier looping in commands.

Value "1" in any of these variables means that the respondent selected the particular option as an answer and in case of value "0" the respondent did not select the option.

- In case the respondent answers with a "none of these" or "other", the naming of the dummy variables has the following structure:
  mmXXXd**no**   "None of these"
  mmXXXd**ot**   "Other"
- In case the respondent answers with "Don't know" or "Refusal", all corresponding dummy variables of that question are set to the respective missing code, i.e. -1 for "Don't know" and -2 for "Refusal".
- In case the question requires loop indication, the digit(s) right after the "d" correspond(s) to the multiple response categories. The loop indication is added as the last part of the variable name separated by a "_" as usual. Hence, all multiple response variables can be identified by the "d"-separator, all loops are identified by the presence of digit(s) after a separation indicator "_".

11. Unfolding brackets

Financial variables are often subject to non-response. It is therefore a common technique to use unfolding brackets in order to reduce non-response. It is found that non-respondents tend to be more willing to answer, if they have to classify e.g. their earnings in rough categories rather than a specific amount. The resulting variables serve as a categorical second best choice to the continuous financial variable of interest. Thus, if a respondent does not provide information for a financial variable she/he is forwarded to a set of bracket values (usually a salient amount such as 2,000 €). In each country there are three different entry points for an unfolding bracket sequence. The interviewer then asks: Do you earn a) more than this amount, b) less than this amount or c) approximately this amount. A respondent can enter up to 3 unfolding bracket sequences. The public release includes the country-specific bracket values (amounts in Euros) and the final category in which the respondent ended. When a DK or RF is given during the unfolding bracket sequence, the value for the final category is set to the respective missing code.

The format of the summarizing unfolding bracket variable is as follows: mmXXXub_LL with "mm" representing the module identifier, "XXX" question number, "ub" indicating an

unfolding bracket sequence and "LL" being optional digits for loop indication. The variable indicating where the respondent finally ends can take the following values:

1. Less than low entry point
2. About low entry point
3. Between low and mid entry point
4. About mid entry point
5. Between mid and high entry point
6. About high entry point
7. More than high entry point
-9999991: "Don't know"
-9999992: "Refusal"

The country-specific bracket values are indicated as mmXXXv1, mmXXXv2, and mmXXXv3. In case of a loop, there mostly exists only one set of bracket values as the country-specific thresholds are constant over loop numbers. Thus, mmXXXv1 contains the lowest threshold for unfolding bracket variable mmXXXub1, as well as for mmXXXub2, etc.

12. Coded variables

SHARELIFE contains a set of coded variables that provide information in a way more convenient to users than the original variables. For the moment, there are coded variables on currencies in which monetary amounts are specified, residential biography, and types of accommodation. Generally, coded variables contain numeric codes following a common code scheme that is either based on text information or collapses country specific code schemes used. The former applies to currency and accommodation coding, the latter to residence coding.

12.1 Coding of currencies

SHARELIFE modules RC, AC, and RE allow respondents to report financial amounts in whatever currency they want to. The interviewers typed the reported currencies with varying accuracy into the interview software. Country teams then coded these currency strings using a common coding scheme. The coded version of the currency strings is stored under the same variable name, only the trailing "_" is replaced by a "c" or, in case of a loop, added to the variable name before the loop indicator (e.g. *sl_re022_1* holds the currency string collected in the interview, *sl_e022c_1* stores the currency code from the common code scheme). The original variables are included in the datasets.

The vast majority of currency strings provided was successfully coded. However, in some instances interviewers typed in strings that could not be coded. In this case the coded currency variable is set to –4 "not codable". In some cases interviewers provided "generic" currency names that are used in more than one country. These were either assigned a code from the table of "generic" currency names (see appendix). Table A1 in the appendix gives an overview of the codes used, including the generic currency names.

Reference period information in currency strings

In some instances interviewers typed in information on reference periods; e.g. when first monthly wage was asked, they entered an amount and in the currency string they typed it was "dollars per week". When we found a currency string that included information about possibly deviating reference periods, we flagged it using a binary coded variable stored at the end of the dataset. The naming of these flag variables is generic, it starts with the original variable name and instead of the trailing "_", "_curRefPer_flag" was added.

Scaling information in currency strings

In some countries some interviewers used a different scaling, i.e. multiples of a currency. E.g. mila lira, which means the amount given is to be read as 1000s of liras. Or the currency string indicated that the amount was given in e.g. cent instead of Euros. All cases detected are flagged with *<VariableName>_curScale_flag*.

Sensible information in currency strings

Country teams checked the raw currency strings on whether they include sensible information (e.g. "dollars, was working for the CIA that time"). In the few cases where such sensible information was found it is deleted from the original currency strings and replaced by >>included sensible information<<.

12.2 Residence Coding

Generally, items in SHRELIFE, as well as in all other SHARE waves, are ex ante harmonised and follow a common code scheme. As an exception in SHARELIFE, respondents' residential history (*sl_ac014*_LL & *sl_ac015*_LL) was assessed by using country specific code schemes – both with respect to regions within the country as well as to foreign countries. For the cross country SHARELIFE dataset this approach produces variables with country specific codes that are inconvenient to handle, when analyzing more than one country. For this reason, residence variables were ex post coded into a common scheme. This coding necessarily led to some loss of information as, e.g., not all countries of residence had a code in every country specific code scheme but were often grouped in different ways (see tables 4 and 5 in the appendix). The released data contain the original variables as well as the ex post harmonised coded variables.

12.3 Accomodation Coding

The variables *sl_ac008*_LL *sl_ac009*_LL and *sl_ac011*_LL contain information on the type of the respondent's accommodation. For questions ac009 and ac011 respondents were asked to select a category from a given list, including an "other-specify" option. If this option was used, the given information was recorded as a string (in the interview language) but ex post coded into variables *sl_ac010c*_LL and *sl_ac012c*_LL using a common code scheme. The assigned codes are shown in table 5 below. The released data only contain the coded variables but not the original string information. However, *flag* variables (*sl_ac010c*_LL_flag, *sl_ac012c*_LL_flag) are additionally included that indicate on which information the coding was based.

Table 4:   **Code schemes for ac010c and ac012c**

ac010c	Code	Label
	1	partner is owner
	2	farmers and sharecroppers
	3	partner is tenant
	4	hotel
	5	in mobile habitation
	6	in non habitation building
	7	hire-purchase
	8	accommodation provided by employer
	9	living at relatives
	10	usufruct
	97	other
	-1	don't know
	-2	refusal
	-4	not codable
	-7	not yet coded (temporary)
ac012c	Code	Label
	1	refugee camp
	2	religious group home
	3	other collective accommodation
	97	other
	-1	don't know
	-2	refusal
	-4	not codable
	-7	not yet coded (temporary)

- Appendix -

A. Currency Codes

Table A1:   Currency codes used in SHARELIFE

Code		Currency
Missing Codes		
-4		not codable
		(not codable at the moment,
		answer to different question,
		amount instead of currency,
		>>other<< code, e.g. 997)
-2		refusal
-1		don't know
Defined Currencies		
1	eur	euro
2	ats	austrian schillings
3	aud	australian dollars
5	bef	belgian francs
7	bgl	bulgarian leva
8	bgn	bulgarian lev
9	bre	brazilian cruzeiros
10	brl	brazilian real
11	brn	brazilian cruzeiro
12	brr	cruzeiro real
13	cad	canadian dollars
14	chf	swiss francs
15	cyp	cyprus pounds
16	czk	czech koruna
17	ddm	mark der ddr
18	dem	deutsche mark
19	dkk	danish kroner
21	esp	spanish peseta
22	fim	finnish markkaa
23	frf	french francs
24	gbp	pounds sterling
25	grd	greek drachmas
26	iep	irish pounds
27	ils	israeli new sheqalim
28	itl	italian lire
29	luf	luxembourg francs
30	mtl	maltese liri
31	nlg	netherlands guilders
32	pln	polish zloty
34	pte	portuguese escudos
35	rub	russian ruble
37	sit	slovenian tolars
38	skk	slovak koruna
39	trl	turkish liras
40	try	new turkish lira

Code		Currency
41	usd	united states dollars
42	usn	us dollar (next day)
43	adp	andorran pesetas
44	aed	united arab emirates dirhams
45	afa	afghanis
46	afn	afghani
47	all	albanian lek
48	amd	armenian dram
49	ang	netherlands antilles guilders
